

G100 Convertible

Gas

Wood

Gas or wood - *that's multifuel!*

MASTER STOVE
MAKER SINCE 1854

G100 Convertible

The G100 is a gas stove with a difference.

This stylish stove is essentially 'future-proof': it can be retrospectively converted to burn wood. Thanks to this pioneering ESSE stove, there no longer needs to be a choice between the immediate control and convenience of a gas stove and the eco-friendly charm of a woodburner.

With the G100 - you have the reassurance of being able to convert it from gas to wood - or vice versa - at a later date. Perfect for combating fluctuating fuel costs and ideal if your circumstances alter or... if you simply change your mind.

The G100 has wide clear glass for you to enjoy the flame and can be programmed to turn on and off automatically. It even comes with a remote control, so you can alter the temperature from the comfort of your favourite chair. It has a heat output of up to 4.89kW.

The natural choice

If you choose to adapt the stove using the conversion kit from ESSE, it transforms into a carbon-neutral woodburner, with oceans of rustic charm and traditional appeal.

When converted to a clean-burning wood stove the G100 has a heat output of 5kW.

*All gas appliances must be installed by a Gas Safe registered installer, all wood installations must be completed by a competent person. All installations must be made in line with fitting instructions.

G100 Convertible

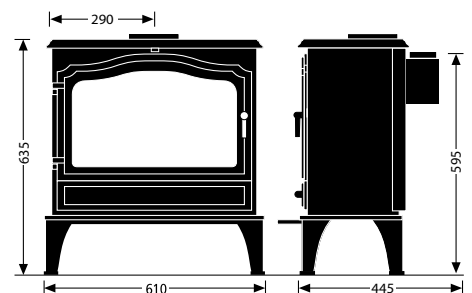

Traditional charm - Modern convenience

The G100 gas stove comes with a remote control which allows you to change the temperature and turn the stove on and off without a standing pilot light; so when the stove is off - the pilot light is too. A standing pilot light can typically cost over £60 per year to run! The G100 can also be programmed to automatically turn on, up to a pre-set temperature and off again, twice a day and has a heat output of up to 4.89kW.

This versatile stove would look equally at home in a modern or traditional property.
